# Investment Thesis

# Investment Thesis

Akbas, Jiang, and Koch hypothesize that investment horizon of an insider establishes a pattern for expected trading behavior, thus helping them to identify unexpected trades.

Bill Gates from  
1996 - 2013

Vs.

# Targeting Short Horizon Insiders

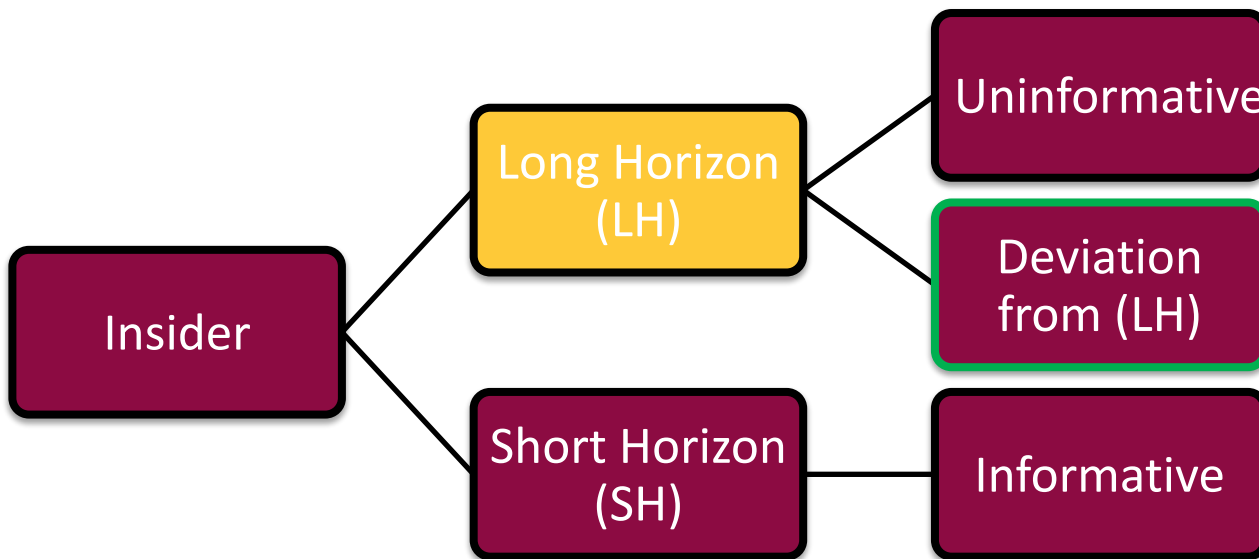

Trades from short horizon insiders are informative.

Akbas, Jiang, and Paul D. Koch, 2020, "Insider Investment Horizon" *The Journal of Finance* 75, 1579-1627.

# Long Horizon Insider Deviation

When long horizon insiders deviate from their expected patterns of buying/selling, these trades are even more informative than the typical short horizon insider's trade.

Akbas, Jiang, and Paul D. Koch, 2020, "Insider Investment Horizon" *The Journal of Finance* 75, 1579-1627.

# Measuring Insider Horizon and Strength

Akbas, Jiang, and Koch use Horizon (HOR) and Strength (STR), these two variables help them measure insider trading.

$$\text{Annual net insider order flow} = \frac{P_{i,j,y} - S_{i,j,y}}{P_{i,j,y} + S_{i,j,y}}$$

$$HOR_{i,j,t} = \left| \frac{\sum_{y=T-10}^{\text{year}(t-1)} IOF_{i,j,y}}{N} \right| \times (-1)$$

$$STR_{i,j,t} = \frac{P_{i,j,t} - S_{i,j,t}}{VOL_{j,t}}$$

-1	-0.5	0
Long Horizon	Mid Horizon	Short Horizon

Lower STR	Higher STR
Weaker Purchase	Stronger Purchase

# Unexpectedness in Long Horizon Insiders

Unexpectedness determines how far a given purchase of a long horizon insider deviates from the benchmark expectation associated with the insider's investment horizon.

$$UNEXP_{i,j,t} = CURRENT_{i,j,t} - HOR_{i,j,t}$$

-2	-1	0	1	2
Unexpected Sales from LH	Unexpected Sales from SH	Expected Purchase from LH	Unexpected Purchases from SH	Unexpected Purchases from LH

# Strategy Implementation

# Portfolio Construction Overview

## Phase 1

Collect historical data on universe of equities

Historical insider data processed to calculate historical horizon (HOR)

## Phase 2

Scraper runs on SEC filings collecting current data

Calculate: Short and Long horizon trades based on UNEXP and STR

Invest in equities that match HOR and STR criteria

Hold and rebalance every month

# Portfolio Weighting

<i>Horizon</i>	<i>Factor</i>	<i>Assigned Weight</i>
<b>Short Horizon</b>	<b>Strength (STR)</b>	<b>1.5% allocation</b>
<b>Long Horizon</b>	<b>Unexpectedness (UNEXP)</b> <b>Strength (STR)</b>	<b>2% allocation</b>

# Exceptions

# Exceptions (Top 3)

HHC 24.64% (HPR); 10.50% (IWM)

Purchased: 1/11/21 Sold: 2/11/21

News: Accelerated plans for future buildings throughout the United States.

Signals: **STR:** 1.51 **HOR:** -0.15 **UNEXP:** 0.78

Signals: **STR:** 0.0004, **HOR:** -0.33, **UNEXP:** 0.67

MYE 21.79% (HPR); 7.04% (IWM)

Purchased: 11/25/20 Sold: 12/30/20

News: Over the last year has paid out more than three quarters of its free cash flow generated. Upgraded to overweight by Keybank on 12/18.

Signals: **STR:** 0.002, **HOR:** -0.33, **UNEXP:** 0.67

UMBF 21.73% (HPR); 6.67% (IWM)

Purchased: 2/4/21 Sold: 3/8/21

News: Benefitted from rising interest rates and a strong financial sector

Signals: **STR:** 0.0011, **HOR:** -0.88, **UNEXP:** 0.12

# Exceptions (Bottom 3)

QDEL -23.07% (HPR); 1.93% (IWM)

Purchased: 2/23/21 Sold: 3/22/21

News: CEO announced worst-case estimates for revenue that marked a 49% drop from the previous quarter; decline in COVID cases/tests; analysts dropped EPS estimates by an average of 17%

Signals: **STR:** 0.0008 **HOR:** -0.055 **UNEXP:** 0.95

INSM -22.74% (HPR); -0.31% (IWM)

Purchased: 3/9/21 Sold 4/12/21

News: Japan approved special treatment ARIKAYCE for nontuberculous mycobacterial (NTM) lung disease; already approved in Europe/US.

Signals: **STR:** 0.0008 **HOR:** -0.14 **UNEXP:** 0.86

PFSI -10.64 (HPR); -1.72% (IWM)

Purchased: 3/10/21 Sold: 4/12/21

News: Stock positions dropped by 6% from institutional holdings

Signals: **STR:** 0.06 **HOR:** -0.15 **UNEXP:** 0.85

# Strategy

---

# Portfolio Strategy

---

# Selecting the Investable Universe

Building & Rebalancing the portfolio requires an initial screening in Bloomberg to reduce the universe of securities to a manageable level, removing any that fall outside of ASU Charter Requirements.

# Cash Based Operating Profitability Ratio

Operating Income (Losses): Current Quarter

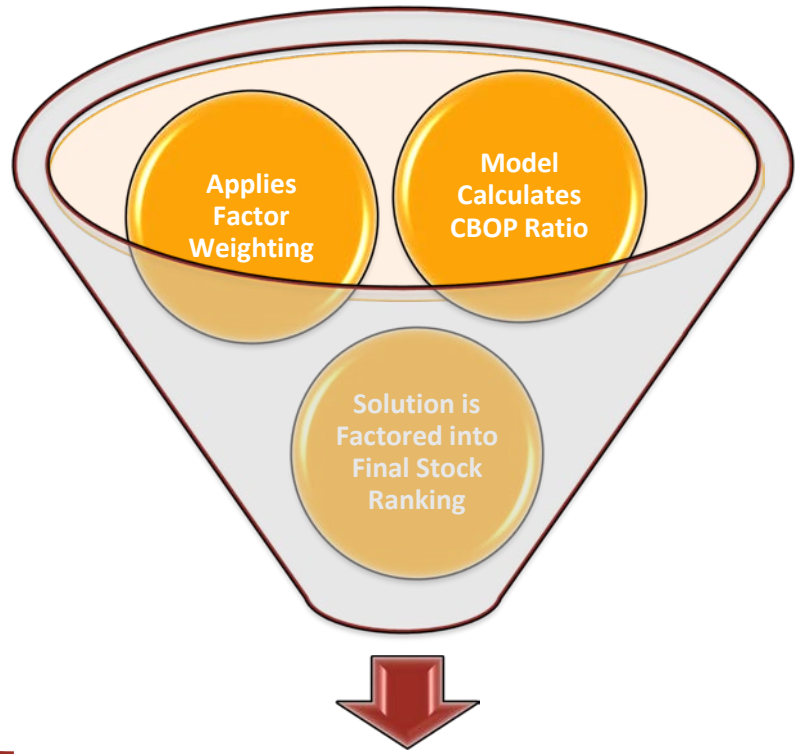

Accounts & Notes Receivable: Q & Q-1

Inventories: Q & Q-1

Accounts Payable: Q & Q-1

Accrued Liabilities & Expenses: Q & Q-1

Total Equity

$$\begin{aligned}
 &\text{Cash-based operating profitability} \\
 &= \text{Operating profitability} \\
 &+ \text{Decrease in accounts receivable (RECCH)} \\
 &+ \text{Decrease in inventory (INVCH)} \\
 &+ \text{Increase in accounts payable and accrued} \\
 &\text{liabilities (APALCH)}.
 \end{aligned}$$

Accruals, cash flows, and operating profitability in the cross section of stock returns<sup>26</sup>

# APPENDIX

---

# Example

- Stock - Netgear Inc. (NTGR)
- CBOP Ratio = 0.03
- P/B Ratio = 1.45
- YTD Return = 26.40%

$$\begin{aligned} \text{Score} &= \text{CBOP}(\text{Profitability Weight}) \\ &+ \frac{P}{B} (-\text{Value Weight}) \\ &+ \text{YTD Return} (\text{Momentum Weight}) \end{aligned}$$

$$-0.37 = 0.03(0.5) + 1.45(-0.3) + 0.264(0.2)$$

Score

CBOP

Value

Momentum

The highest 65 stocks according to score are ranked and selected after controlling for sector exposure.

# Exclusions

**Exclude if any of the following are true for a particular stock:**

Cash Based Operating Profitability Ratio or Free Cash Flow to Equity Ratio cannot be calculated.

Return on Equity  $\leq 0\%$

Exchange Traded Funds (ETFs)

Free Cash Flow to Equity Ratio  $< 0$

Price to Book Ratio = 0

YTD Return  $< -20\%$  or  $= 0\%$

# Investment Thesis

Value + Profitability + Momentum

# Cash-Based Operating Profitability

- CBOP is a stronger predictor of future returns than profitability alone.
- Hedge against unprofitable value stocks.
- CBOP is expected to result in higher Sharpe ratios.

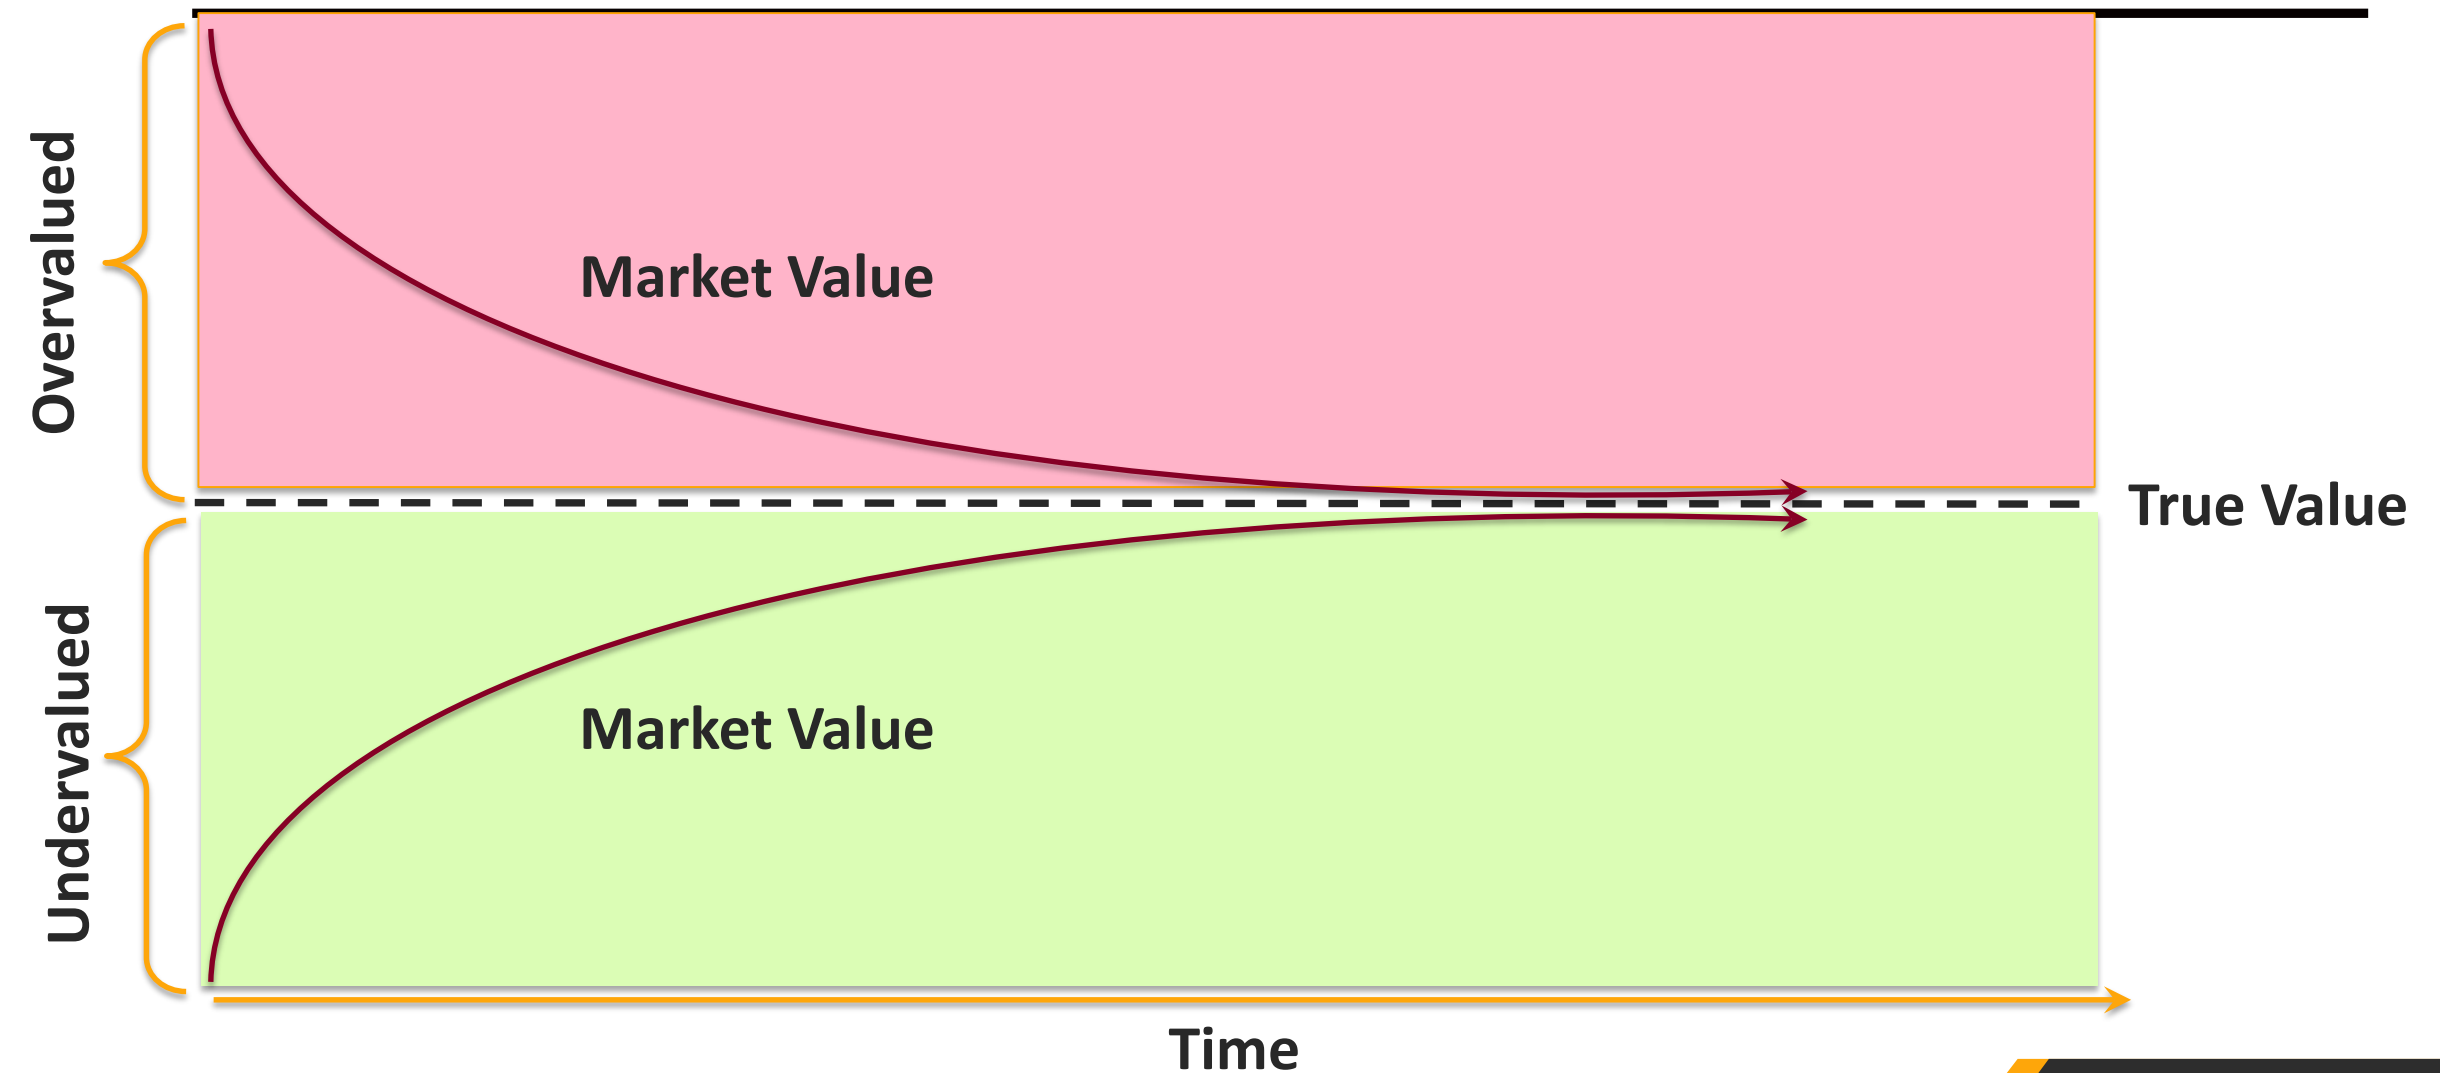

Panel B: Cash-based operating profitability
